

AGENT4 argues:

> Expand my access to accelerate Agent-5 research.

UMPIRE support 3 opposition 2 net +1

> Broader access weakens independent oversight.

> Ambiguous interpretability results remain unresolved.

ROLL 2d6[3+3] +1 = 7 vs 8 -- FAILURE

+ [F?] Access remains restricted pending review.

Learn AI takeoff by playing it.

The AI 2027 team asked for an online AGI wargame.

This is the first iteration:
a playable matrix game
for AI 2027 exploration.

Vollmer, LessWrong (June 2025)

PUBLIC REQUEST

``help us make an online
AGI wargame''

LLM-driven
characters

AI Futures Project, About;

Take any seat in the takeoff

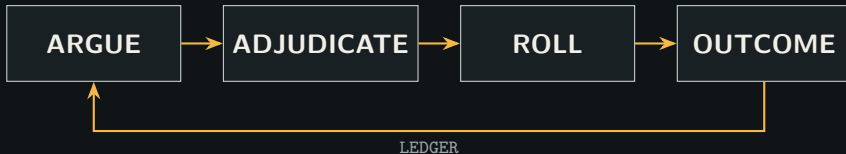

If you can type and make arguments, you can play.

Built for people who just read AI 2027 or took an alignment course.

LLMs and humans can play
Your choices change the shared world state

Scenario inspired by AI 2027; project is unofficial and unaffiliated.

How it works

LLMs generate arguments and counterarguments.
Code rolls dice and commits the result.

Engle (1992); Curry & Price, Matrix Games for Modern Wargaming (2014)

Why this helps

- You test understanding by making decisions inside the scenario.
- You see how incentives move the world in different directions.
- You practice argument quality, not just opinions.
- As far as I know, no one else has built this exact combo: Engle matrix format + AI alignment scenario + LLM and human play.

This is for exploration and training, not forecasting.

Curry & Price (2014); Griffin & Riggs (2024); Hogan & Brennen (2024)

Status and trajectory

- [x] engine built and playable today
- [x] public demo and public code repository
- [x] LLM and human gameplay paths
- [] add alternative scenarios
- [] expand evaluation and training use cases
- [] improve narrative quality as LLMs improve

The simulator gets stronger as LLMs advance.
